Red Tacky #2 Grease is a premium-quality, extremely stable lithium complex grease suited for a wide variety of industrial and automotive service applications including chassis and wheel bearings. This extreme pressure grease is recommended for use across multiple industries, including on-road, off-road, and industrial applications. Retains its consistency even in the most severe service. The additives provide excellent extreme pressure and anti-wear protection under severe conditions. It demonstrates excellent corrosion resistance, thereby extending equipment life -- of particular importance in applications where moisture is present. The oxidation inhibitors in this formula extend the grease life and protect the application for longer periods. The red color and tacky, moly-free formula make them ideal for many problem applications. Meets the ASTM D4950 requirements for Wheel Bearing Category GC and Chassis Lubrication Category LB.
